

## **Job Description**

### **- Architectural Technology Associate**

#### **About us:**

Acelab Inc. is looking for a curious and motivated architect to join the Indian team with an inclination towards design technology who is excited about defining the next frontier of digital tools adopted in the architectural practice. This is a learning opportunity on two fronts— you will be able to strengthen your knowledge about building products and professional practice, and also be exposed to working in a new-age high-growth startup environment.

#### **Scope of Work:**

Acelab encompasses the broader field of architecture, extending beyond the design aspect. You will have the opportunity to learn extensively about building materials and their functionalities, including installation methods and current market trends. We cover all construction categories, encompassing both interior and exterior applications. While design is important, our field typically does not delve into this level of material detail until required on-site. This new role will be a valuable addition to your resume, enhancing its versatility.

#### **Responsibilities:**

- Uploading publicly listed building products into Acelab's database.
- Developing an understanding of Acelab's novel building product categorization system.
- Researching existing building product manufacturers and their product offerings.
- Collaborating with product developers and market researchers to understand existing products.
- Suggesting possible functionality improvements to the platform's upload portal.

#### **Requirements:**

- Completed B.Arch. or equivalent industry experience
- Clear communication skills and a good work ethic
- Interest in getting to experience the business development phase of a fast-paced start-up
- Preliminary understanding of building product assemblies and pro practice.
